# Chapter 12 Creating Java Package by Munawar

## Using a Java Package

Import java. Lang *-------------- > import everything from java Lang

Import java. Lang String --------> import string from java Lang

S= new java Lang String ("munawar") --------> use without importing

## Creating a Package

Javac Munawar.java --------------- > Creating Munawar Class

Javac –d. Munawar Java--------> creates a package folder

-------> We can keep adding classes to a package like this

We can also create inner package by adding package. Inner as package name.

These packages once created can be used by other classes.

## Source Code

```
//import java.util.Scanner;
//import java.util.*;
public class packages {
    public static void main(String[] args) {
        java.util.Scanner scc=new java.util.Scanner(System.in);

//        Scanner sc=new Scanner(System.in);
//        System.out.println("This is my Scanner:");
        int a=scc.nextInt();
        System.out.println("this is type: "+a);
    }
}
```

Thank You
