The Date class in Java by Munawar

Quick Quiz:

Is it save to store the no of ms in a variable of type long?

Answer is yes.

The Date class in java

Date d= new Date ();

System. Out. Print (d);

We can also use constructors provided by the Date class.

Java date class has few methods which can be used for ex. get Date () , get Day()
etc.

All these methods are depreciated.

Source Code

```java
import java.lang.reflect.Array;
import java.util.*;

public class NewTask {
    public static void main(String[] args) {
// quiz answer Yes
//        System.out.println(Long.MAX_VALUE);
//        System.out.println(System.currentTimeMillis());

        // for current date, current date is feb 18  10:26  2023
        Date d=new Date();
        System.out.println(d);

        // methods of java date
        System.out.println(d.getTime());
        // current day of this month
        System.out.println(d.getDate());
    }
}
```

Thank You
