Chapter 12 Packages Java by Munawar

Packages in Java

A package is used to group related classes. Package help in avoiding name conflicts.

There are two types of packages:

#. Built in package --------------- > Java API

#. User defined package --------> Custom Package

Song MP3 photos.jpg   Photos PNG Song MP3

Video.MP4   Video2.MP4   ======> Song Photos video

Organizes OS folders

1 class this java my mp3

Song java munawar java

Source Code

```java
import javax.swing.plaf.synth.SynthTextAreaUI;
import java.util.Scanner;
import java.util.Random;
// Scanner and Random both are built in package

public class Main {
    public static void main (String [] args) {

        // Only theory discuss

    }

}
```

Thank You
